

Meeting & Event Scheduling Software Re-engineering

For a North American technology service provider to achieve better performance and extensibility

PROJECT OVERVIEW

The customer with decades of experience serving the public sector, especially the local government and schools through technology, wanted to re-engineer their legacy global meeting & event scheduling system with advanced features to improve its efficiency, scalability, with optimum security. While the maintenance of their legacy application was the primary concern, they were looking for a reliable solution to improve the system's performance.

KEY FEATURES

The re-structured application with advanced enhancements efficiently handles automated meeting planning and follow-up process with unlimited registrants.

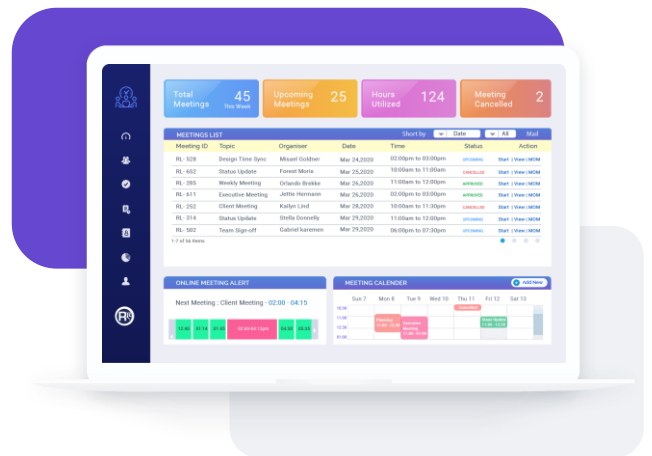

- ▶ **Enhanced UX/UI**

The new intuitive dashboard facilitates authorized council members to access, review, approve or reject agenda items in real-time
- ▶ **Streamlined topics**

Saves time and money with a paperless process from topic submission through minutes publication
- ▶ **Automated agenda builder & organizer**

Create precise meeting agendas using simple drag and drop functionality. It allows attaching relevant documents, contracts, maps, charts, and other content to support agenda topics
- ▶ **Eliminate data error**

Digital documentation reduces manual paper-based cumbersome tasks and eliminates potential risks of human error

CHALLENGES

- ▶ Complex structure of existing application
- ▶ No document management and real-time document updating feature
- ▶ Migrate system database and source-code with minimum possible downtime
- ▶ Not so smooth user interface impacting app functionality adversely
- ▶ Huge product maintenance cost

SOLUTION

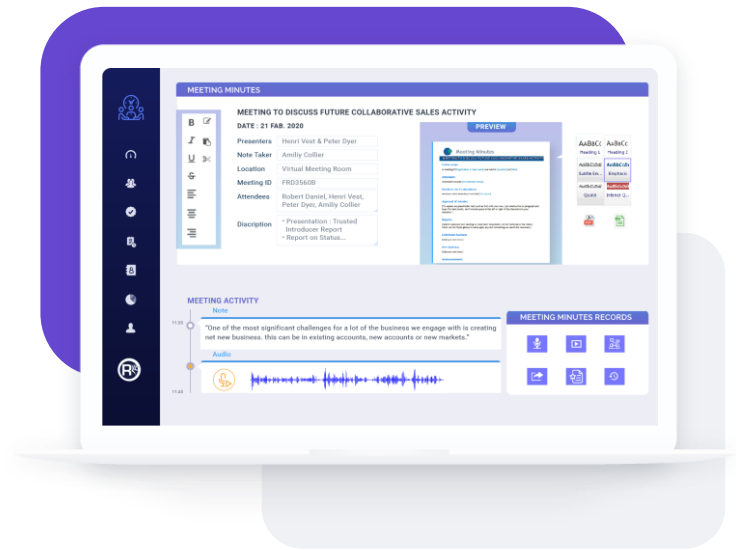

The modernized solution was one-of-a-kind to provide seamless third-party integrations into a single solution. It offers consistent and optimal user experience across devices.

Agile approach

Our team understood the existing code and created comprehensive documentation for the to-be product model to deliver the proposed solution on time by applying agile methodology practices and standards

Database migration

The entire source code and all the digital contents and documents were migrated to the latest web technology framework with almost no downtime

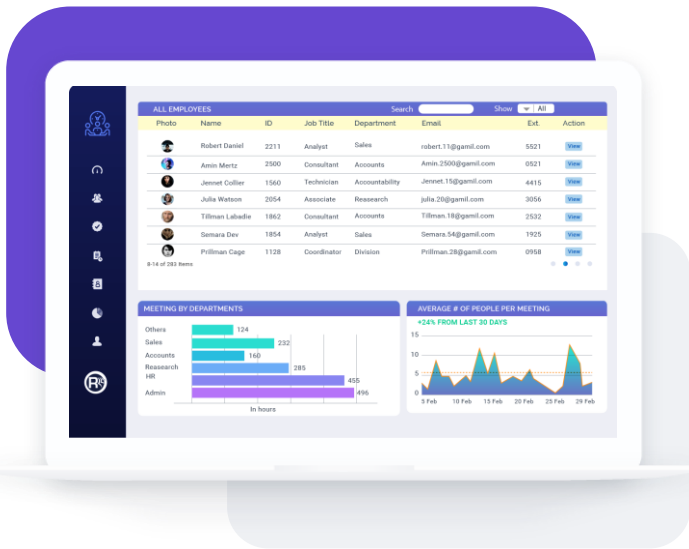

Centralize meeting management

Eliminate time-consuming tasks & streamline meetings by creating, planning, and scheduling events efficiently through online application

Product performance enhancements

We meticulously optimized application performance and solved potential issues by implementing anticipated features such as workflow management, improved document search, easy integration with a third-party solution, and more
